Build Automation	:	Maven

Work History

2021-08 - Current
Project: Mastercard

Software Test Automation Engineer (*Epam Systems, Pune (India)*

- Working at Epam Systems as a Software Test Automation Engineer for a Card & Payment Domain based Project.
- Based on the assigned stories, my job is to first analyze the client's requirements and prepare the test plan and write automation test cases which are in scope.
- By using Selenium Web-driver create test scripts which covered all possible scenarios.

- Execution of the test scripts on all the different environments including devlite and Staging.
- Create the Jenkins job of all the automated scenarios and track them accordingly.
- Uses Splunk to find the root cause of the failures and update on the open issue pages so that anyone can track them.
- Important Member of the Scrum call where we do the stories grooming and assign them to individuals.
- Uses Rally a track management tool to track the defects and the story progress.
- Make the Confluence Pages with respect to assigned feature what in scope or what not.
- Important member of the calls where we discuss about Releases and Regression failures.
- Expertise working on Web Testing and Cucumber framework based on UI and API automation.

2020/08 -2021/08
Project: WYO

Quality Analyst (*Synapses LLC, Indore, Madhya Pradesh*)

- Testing an ecommerce application helps in the prevention of errors and adds value to the product by ensuring conformity to client requirements.
- The objective of testing is to ensure Software reliability, Software quality, System Assurance, Optimum performance, and capacity utilization.
- Creating Automated Test Scripts for various e-commerce applications by using Selenium Web-driver.
- Execution and Maintenance of test scripts based on the requirements. Reviewing of Functional
- requirements/specifications and create test cases accordingly.
- Involved in application walk through for clear functional requirements.
- Create detailed, comprehensive, and well-structured test plan and automation test cases.
- Used Extent Reports to generate more pictorial reports for the test cases.

2019/03-2020/06
Project: UrbanClap

Quality Service Analyst (*UrbanClap Technologies, Gurgaon, Haryana*)

- I used to work as a Quality Service Analyst with web-based application which facilitates user to render services for professionals booking.
- It helps user to book the professionals with respect to service they want.
- This web application also authenticates the user by facilitating them to register themselves by using login pages.
- Worked on various applications to understand the end-to-end flow of the project.
- Involved in BA walkthrough and active participation in defect triage meetings. Executing test
- Wrote test cases using Core java concepts and Selenium WebDriver interface.
- Develop and apply testing process for new and existing products to meet client needs.
- Involvement in Test Execution, Results Analyzing and Defect Reporting and RTM Preparation.

Education

2011-08 - 2015-04

Bachelor of Technology: Electronics and Communications Engineering

Arya Institute of Engineering & Technology – Jaipur
